- 30pin adapter
- Micro USB adapter

Before You Start

Make sure you have charged the device for 10 or more hours prior to use.

It is recommended that you charge for at least 24 hours; however we know this is not always possible.

1) Plug in the device using the USB cables to a mains or USB port
2) 2nd light from the bottom will be on constant when charging
3) The light will go out when the device is fully charged

This Battery has a built-in 3000mAh Battery and can charge your phone or a device when plugged into one of the USB ports.

Starting up

Before using your device please ensure it has been fully charged. Also please note that battery life will improve with continued use as these items have never been used prior to you purchasing them. Make sure there is an SD Card in your device. This item takes up to a 32GB SD Card and needs one to work. Without and SD Card this item will not work at all.

To insert an SD card please locate the slot and insert the SD Card – with the power button facing upwards turn your SD Card upside down and insert it. You will feel resistance on a spring loaded slot – push and the card will click into place.

When the memory card is full and when the battery is too low to function the 3rd and 4th lights will flash continuously on the device.

WHEN FOLLOWING THESE INSTRUCTIONS PLEASE HAVE THE CAMERA LENS FACING AWAY FROM YOU. WITH THE POWERBANK CAMERA WITH THE USB ENDS FACING TOWARDS YOU.

Constant Filming Mode:

When in constant filming mode the camera will film in 10min chunks each time.

1) Press the Power button on front of item once
2) When the light 3rd from the bottom is on constant the item is in standby mode
3) To take a Video Press Power button once and light will flash 3 times slowly
4) Press again once to stop filming

Photo Mode:

1) Press the Power button on front of item once
2) When the light 3rd from the bottom is on constant the item is in standby mode
3) Press the Power Button two times in a row
4) When the light 4th from the bottom has flashed it will have taken a photo

Motion Detection Mode:

When in motion detection filming mode the camera will film in various sized chunks each time according to the motion detected.

1) Press the Power button on front of item once
2) When the light 3rd from the bottom is on constant the item is in standby mode
3) Press the Power button 4 times in a row
4) When the light 3rd from the bottom and the light 4th from the bottom both flash it will be in motion detection mode
5) When motion is detected and the camera is filming the 3rd light from the bottom will go out. The 4th light from the bottom will slowly flash and go out when it is filming.
6) When motion stops in front of the camera it will stop filming and the 3rd and 4th light will come back on and slowly flash awaiting any motion then when motion is detected step 5 occurs again and so on until the item runs out of battery power.

Torch Mode:

1) Press the Power button on front of item once
2) When the light 3rd from the bottom is on constant the item is in standby mode
3) Press the Power button 5 times in a row and the torch will activate
4) Press the Power button once to turn off Torch

Timestamp Edit

You may need to update the internal clock for the timestamp shown in images and videos.

To do this, you will need to create a Text file with the date and time.

1) Plug the camera into your computer by using a USB cable.
2) It will appear as a Removable Disk.
3) Open the Removable Disk; you might have a folder called DCIM and a text file called "time" already there.
4) If you already have a file called "time" then move onto Step 7.
5) Right click in the white space and a menu will appear (Figure 3), move down to "New" and select "Text Document".

Figure 1

6) A new Text document will appear (Figure 4) and give you the option to name it, call it ""timeset.txt".

Burn   New folder

Name	Date modified	Type	Size
New Text Document	10/05/2012 15:05	TXT File	0 KB

Figure 2

7) Open this time file and write the date and time in the following method:
   a. 2014.01.01 12:00:00 Y (this is only an example use the correct date/time)
   b. Type Y to use timestamp and N to not use timestamp
8) Save this file and use your item as normal and the time stamp will be set from now on

9) Save and close the file.
10) Unplug the camera from the computer and turn it on. The time is now updated.
11) Plug the device back into your computer and delete the time file if still there.

Video Resolution Edit

If you want to change the resolution of the videos and images on your device you can do so. The lower the resolution the less disc space will be used on your SD Card allowing for more files.

1) Plug in the device to a Computer using the USB cables
2) Right click and go to "New" and then click on "Text Document"
3) Save this document as "sizeset.txt"
4) Open this document
5) Type the following exactly:
   a. 1
      i. If you type 1 the resolution ratio will be: 1920 x 1080
   b. 2
      i. If you type 2 the resolution ratio will be: 640 x 480
   c. 3
      i. If you type 3 the resolution ratio will be: 1280 x 720
   d. 4
      i. If you type 4 the resolution ratio will be: 1920 x 1080
6) Save this file and use your item as normal and the resolution will be set
